## Welcome Note

Dear Colleagues,

Welcome to the 19<sup>th</sup> European Congress of Psychology (ECP2025) in Paphos, Cyprus!

In an era marked by immense challenges and relentless crises, the sheer pace and complexity of global developments can feel overwhelming, leaving many adrift. These shifts profoundly impact everyone's lives, and it is precisely here that psychology must — and wants to — step forward to help.

As a science, psychology strives to describe, understand, and explain these intricate problems, and crucially, to foster positive change. To navigate these turbulent times, we need a reliable compass. Alongside numerous other sciences and professions, the United Nations' Sustainable Development Goals (SDGs) serve as our guiding light.

The ECP2025 in Paphos offers an exceptional platform to critically assess our position as a science and profession in addressing the urgent issues of our time. This congress will undoubtedly highlight psychology's inherent strengths. As a cultural and social science, a natural and health science, and a life and engineering science, psychology possesses the diverse tools needed for profound impact. Its versatility creates a vital bridge to all other sciences and professions.

This program you hold is your invitation to engage in vigorous discussion, thoughtful reflection, and the collaborative pursuit of creative solutions through dialogue with other disciplines. It is also the perfect setting to learn, grow, and rejuvenate your professional practice.

Paphos itself promises "New knowledge through memorable experiences." With its rich history, ECP2025 provides a unique opportunity to blend European tradition with cutting-edge research and practice. Here, you can connect with people from diverse cultures and societies, collectively advancing psychology as a science and profession in service of Agenda 2030 and beyond.

We eagerly anticipate a joyful, creative, and inspiring ECP2025 in Paphos!

Please take a moment to explore the rich program our colleagues have curated for you!

**Prof. Dr. Christoph Steinebach**  
EFPA President

## Welcome Note

“*Kalosorise!*” – a warm welcome to the 19<sup>th</sup> European Congress of Psychology

Dear colleagues,

It is with great pleasure that we welcome you to the 19th European Congress of Psychology - ECP 2025, set against the stunning backdrop of Pafos, Cyprus.

Psychology—as a science, a profession, and an evolving field of study—has never stood still. It continuously adapts, challenges long-held assumptions, and ventures into new domains of research and application. Especially in recent years in the wake of the global developments, the relevance of psychological science has grown more apparent than ever. Human behaviour lies at the heart of many of today's most pressing global issues.

As our world becomes increasingly complex, psychology is being called not just to participate in global conversations, but to lead them. Psychologists are now among the most sought-after experts in mainstream media and public policy.

Our theme, “**Transforming Psychological Science: The 2030 Agenda**,” reflects this pivotal moment. Through this congress, we aim to explore where our field is headed, how it can shape society, and how we—as a united community—can set our agenda for the coming years. The program has been built around EFPA’s Seven Pillars of a Unified EU Mental Health Strategy and its Fields of Action, inviting us to think boldly, act collaboratively, and imagine psychology’s transformative power in the next decade.

Cyprus, a crossroads of continents and cultures, provides the perfect setting for this exchange of knowledge and ideas. We hope your time in Pafos will be both intellectually enriching and personally memorable.

Our motto for ECP 2025 is: “**New knowledge through memorable experiences**.” We are confident this congress will offer a stimulating scientific program, complemented by a vibrant and welcoming social atmosphere.

On behalf of the Local Organizing Committee, welcome to Pafos and to ECP 2025!

Warm regards,

**Dr. Eleni Karayianni**  
Chair, ECP 2025

## Welcome Note

Dear Colleagues,

It is with great enthusiasm that I welcome you to the 19th European Congress of Psychology from 1-4 July 2025, in the historic city of Paphos, Cyprus. Under the theme “Transforming Psychological Science: The 2030 Agenda” this Congress aims to provide a platform for psychologists to address pressing global challenges through the lens of our discipline. By focusing on a variety of topics such as health and well-being, opportunities and challenges posed by technological evolution and the rise of artificial intelligence, the education and training of psychologists, as well as the climate crisis, ECP 2025 provides a platform highlighting the potential of psychological science to transform lives and meet global challenges.

ECP 2025 features an inspiring scientific program, including keynote speeches, symposia, oral presentations and workshops led by internationally renowned scholars and professionals. Our program features esteemed speakers and a diverse array of high-quality sessions designed to foster collaboration and innovation within our community. By engaging with professionals from various fields, we aim to broaden our perspectives and enhance the impact of psychological science on society. Paphos, with its rich cultural heritage and history of intercultural dialogue, offers an ideal setting for these meaningful exchanges.

I encourage you to participate actively in the Congress, whether by presenting your research, attending sessions, or engaging in discussions. Your contributions are vital to advancing our field and addressing the complex issues of our time.

A very warm welcome to Paphos and to a Congress that promises to be both intellectually stimulating and professionally rewarding.

Sincerely,

**Prof. Dr. Ioulia Papageorgi**  
Chair, Scientific Committee  
European Congress of Psychology 2025

## CALL FOR PAPERS

Special Issue in *European Journal of Psychology Open*

### **Transforming Psychological Science in Europe and the World: Developments and Insights from the 19<sup>th</sup> European Congress of Psychology**

The **European Journal of Psychology Open (EJPO)** as the official empirical journal of the European Federation of Psychologists' Associations EFPA, aims to highlight and promote empirical research in Europe, and feature the best current trends in the field.

Following up on previous European Congress of Psychology Special Issues, and in coordination with the organizers of the **19<sup>th</sup> European Congress of Psychology**, EJPO announces an open call for a Special Issue comprised of empirical papers by the speakers and participants in the Congress, scheduled to be published within 2025-2026. We aspire for rigorous and speedy peer review. The Special Issue will be edited by Professor Ioulia Papageorgi and Dr Eleni Karayianni, with the assistance of the EJPO editors.

We invite empirical papers in any area of psychology, following either quantitative or qualitative methodologies. Meta-analytic papers are also welcome. Papers that are descriptive of trends, or describe professional issues, are also relevant, as long as they are empirical.

We also welcome for this special issue, papers that would showcase the empirical aspects of the work of international, regional and national psychology bodies (such as EFPA committees and working groups or similar structures in other bodies): For example, surveys of psychologists, psychology associations or other samples, conducted to document a current problem or new development in the domain of the working group's scope of activities, descriptive statistics on an issue relevant to psychology that is part of outcome reports on the work, or the results of other types of small studies (quantitative or qualitative), conducted as part of the group's actions or dissemination activities.

As per the journal's policies, we also encourage submissions by early stage researchers and involvement of early stage researchers in the review and editorial process. Early career researchers who may have questions about the fit of their work for the journal, or who are interested in acting as reviewers for the journal are encouraged to contact the senior editor.

#### **Deadlines**

|   |                   |
|---|-------------------|
| Submit abstract to the journal for consideration: | <b>31/08/2025</b> |
| Submit full paper to the journal for review:      | 31/10/2025        |

Manuscripts must be prepared in accordance with the journal's author guidelines available on the journal's website [www.hgf.io/epo](http://www.hgf.io/epo).

Abstract submission: [ejpoeditor@ucy.ac.cy](mailto:ejpoeditor@ucy.ac.cy)  
Article submission: [www.editorialmanager.com/ejpo](http://www.editorialmanager.com/ejpo)

We are offering a generous promotional APC fee of 500 Euros to participants in this Special Issue in order to encourage involvement of EFPA members and collaborators with its official open access empirical journal, EJPO. This exclusive discount cannot be combined with other discounts.

## About CYPSA

Cyprus  
Psychologists  
Association

The Cyprus Psychologists' Association (CYPSA) is a scientific and professional organization founded in 1980. Originally, its purpose was to promote the profession and science of psychology and to look after the interests of all psychologists in Cyprus. Since 2017, CYPSA has redefined its vision and mission to broaden its scope.

Our renewed vision is to develop, safeguard, and promote psychological science in Cyprus. Our mission is the development and promotion of psychological scientific knowledge within the professional world and the greater public of Cyprus; the education of the public on topics pertaining to psychology; and the promotion and safeguard of the psychologist profession. The Association functions as a communication forum for psychologists both in practice and in academia, as well as between psychology and society.

CYPSA has been a Member Association of the European Federation of Psychologists' Associations (EFPA) since 1995, and of the European Federation of Psychology Students' Associations (EFPSA) since 2007.

<https://cypsa.org.cy/>

## About EFPA

European Federation of  
Psychologists' Associations

EFPA is the umbrella organization in Europe for national psychologists' associations and currently comprises associations from 38 European countries, including all 27 member countries of the European Union.

Founded in 1981 EFPA has a long tradition of developing psychology (by enhancing scientific and professional standards), contributing to society (by using psychological knowledge and competences in support in particular of the UN sustainable development goals) and serving psychologists (by advancing, promoting and protecting the profession of psychologists at the national and European levels).

EFPA has a network of some 350,000 psychologists through its Member Associations (professional practitioner psychologists and researchers) and many stakeholders including associate member organisations that represent aspects of psychology at the European level, and affiliated member European teaching and student organisations.

EFPA is a partner in many EU Commission funded research and development projects. EFPA sets a European standard of education, professional training and competence in psychology, EuroPsy. Find out more about EFPA's strategy and aims.

**Working on your next manuscript?  
We're here to help you find the right journal  
and reach the audience you need.**

## Keynote Speakers

### Prof. Marios Avraamides

**Department of Psychology, University of Cyprus, Nicosia, Cyprus**

**Title:** From Lab to real-world: Using Virtual Reality to assess and train cognitive skills

**Wednesday, 02 July 2025, Room: Akamas A, Time: 10:00-11:00**

**Abstract:** Virtual Reality (VR) technology has gained widespread popularity in recent years, but it has been a valuable research tool in certain fields long before becoming affordable and user-friendly. In spatial cognition research, for example, VR has been used to investigate the cognitive processes underlying fundamental everyday tasks, such as maintaining spatial orientation and navigating through environments. Today, VR is widely employed across nearly every domain of cognitive science and psychology in general, offering a unique balance between ecological validity and experimental control. In this presentation, I will discuss how I initially employed VR in my research on spatial cognition and how I have since utilized it as a tool for assessing and enhancing cognitive functions in professional applications, demonstrating its potential for bridging the gap between research and real-world practice.

**Short Bio:** Dr. Marios Avraamides is a Professor of Cognitive Psychology at the University of Cyprus where he teaches courses on Cognitive and Experimental Psychology, Memory, Attention, and Perception. He is also the Pillar Leader of Human Factors & Design at CYENS Centre of Excellence.

He has previously obtained a BA in Psychology from the University of Texas at Austin and an MSc and a PhD degree in Cognitive/Experimental Psychology from the Pennsylvania State University. Prior to returning to Cyprus, he has worked as a postdoctoral scientist at the University of California Santa Barbara (USA) and at the Max-Planck-Institute for Biological Cybernetics (Germany).

His research focuses on the cognitive mechanisms that support memory, attention, and perception, using a variety of techniques including VR, Electrophysiology, and Neuroimaging. He has more than 20 years of experience in developing content for Virtual Reality.

His research has been funded by multiple research grants, including a prestigious starting grant from the European Research Council (ERC). He has participated in various international panels, including the ISCH domain of the European COST framework and the SH4 panel of the ERC competition.

### Prof. Giuseppe Carrus

**Department of Education Sciences, Roma Tre University, Rome, Italy**

**Title:** The past, present and future of environmental psychology and its contribution to the current global environmental challenges

**Thursday, 03 July 2025, Room: Akamas A, Time: 10:00-11:00**

**Abstract:** To achieve a transition to a more sustainable human society, the need of radical lifestyle changes is increasingly recognized, at the scientific, political and public opinion level. In some ways, a transition to a low-carbon, more inclusive, more democratic and open society has already started, after various important political and governmental actions (among them, the UN Agenda 2030 or the European Green Deal of the EU), but also as a consequence of bottom-up and spontaneous popular movements of world's younger generations. This suggests how environmental psychology, and psychological sciences in general, still have an important voice and a fundamental role to play in this process. In fact, many global phenomena like climate change, urbanization, environmental risk and related perceptions, and environmental intercultural processes are increasingly attracting the attention of behavioural researchers in a variety of practical domains and cultural contexts. Following the tradition of a problem-focused and multi-disciplinary approach on which environmental psychology was founded, in this keynote we resume the main past foundations, present achievements and future challenges of people-environment studies. In doing so, we provide some brief examples of recent empirical findings and research projects focusing on two main lines of investigation: 1) the application of psychological interventions and behavioural strategies for the promotion of ecological behaviour and sustainable lifestyles, and 2) the promotion of human wellbeing in daily life contexts, in urban and natural settings.

## Keynote Speakers

**Short Bio:** Giuseppe Carrus has a PhD in Social Psychology. He is Full Professor at the Department of Education Sciences, Roma Tre University, Rome, Italy. He is author of several scientific publications, including articles in peer-reviewed national and international journals, volumes and chapters in collective volumes. He took part and/or coordinated several nationally and internationally funded research projects, including the EU-funded projects “DIALOGUES” (H2020), “ENCHANT” (H2020), “ECHOES” (H2020), and “GLAMURS” (FP7). He is Chief Specialty Editor of *Frontiers in Psychology – Environmental Psychology*.

### Prof. Eirini Flouri

**Institute of Education, University College London, London, UK**

**Title:** The role of the context in child development

**Thursday, 03 July 2025, Room: Akamas A, Time: 17:00-18:00**

**Abstract:** Much of the research in child development exploring the role of the context focuses on children’s very proximal social environments, typically family and peers. We know much less about the role of the physical context in child development, especially in socioemotional and cognitive functioning. In this talk I will discuss the research I have carried out exploring the role of the physical environment in the home and in the neighbourhood on these aspects of child functioning. This research showed that while the impact of the home’s physical environment is reduced after accounting for socioeconomic disadvantage it is still important. The findings of the role of physical characteristics of the neighbourhood (or ‘the built environment’) on these child outcomes are more nuanced. The impact appears to be outcome-specific and dependent on how the built environment was measured. Even after controlling for both neighbourhood and family socioeconomic disadvantage however, the built environment, especially when holistically measured (e.g., by neighbourhood disorder, greenspace, air pollution and urbanicity), can still shape child outcomes. This research suggests that tackling place-based inequalities may have long-lasting benefits for individuals and societies.

**Short Bio:** I received my PhD in psychology in 2000 from the University of Exeter, was a postdoctoral research fellow at Oxford in 2000-2004 and joined UCL Institute of Education as senior lecturer in 2005. I was promoted to reader in 2008 and professor in 2010. I am mainly interested in understanding the causes of children’s emotional and behavioural problems. Complementing my previous work on the role of family (parenting, parental mental illness and poverty) and the broader context (neighbourhood and school), my current research starts to explore the role of biological factors, such as inflammation, in the development of emotional and behavioural problems in childhood. My broader research agenda is to test theory driven mediated moderation models of the effect of cumulative contextual risk on child psychopathology, so as to be able to advance theory on how risk impacts on child development and on how resilience can be promoted.

### Dr. Maria João Forjaz

**National Center of Epidemiology, Spanish National Institute of Health Carlos III, Madrid, Spain**

**Title:** Contributions of psychology to epidemiology and public health

**Wednesday, 02 July 2025, Room: Akamas A, Time: 17:00-18:00**

**Abstract:** Epidemiology is a multidisciplinary field of knowledge, part of the public health, that aims to study the distribution and determinants of health-related events in the population. Individual and behavioral factors play a crucial role in the appearance, trajectory, treatment and recovery from health conditions. Therefore, psychology, as the study of mind and behaviors, offers important contributions to epidemiology. This talk will discuss the key relationship between these two fields of knowledge, psychology and epidemiology, by providing examples in several areas such as social determinants of health, mental health, psychosocial aspects of chronic health problems, behavioral insight studies and health behaviors, gender studies, lifespan perspective, in addition to methodology contributions including patient reported outcomes and psychometrics.

## Keynote Speakers

**Short Bio:** Dr. Maria João Forjaz is a scientific researcher at the National Center of Epidemiology, Spanish National Institute of Health Carlos III. She graduated from University of Lisbon and obtained her doctorate in Clinical Psychology from University of North Texas, USA, with a Fulbright scholarship. She participates actively in the training of junior researchers and medical residents in public health and preventive medicine. Her research interests include scale validation and health indicators, quality of life, ageing, impact of COVID-19, pandemic preparedness and behavioural and cultural insights. Dr. Forjaz is the author of more than 160 articles in peer-review journal and several books and book chapters. She is a group leader at the Spanish research network Research Network on Health services and Comorbidity (REDISSEC) and part of the Spanish focal point of the WHO initiative in Behavioural and Cultural Insights. Since September 2024, she is the elected president of the Spanish Society of Epidemiology.

### Prof. Maria Karekla

**Department of Psychology, University of Cyprus, Nicosia, Cyprus**

**Title:** Can we achieve alleviation of suffering? Digitally moving towards the future of healthcare

**Friday, 04 July 2025, Room: Akamas A, Time: 10:00-11:00**

**Abstract:** Approximately half of the world's population owns a smart phone and utilizes the internet. Digitized means present with great opportunities to harness health behavior change in individuals. The digitalization of societies, coupled with increasing demands for self-management, cost-effectiveness, time-limited, widely accessible and quality services, present with an ideal arena for innovative approaches in the provision of services. Digital technologies offer opportunities for research and practice to encapsulate recent recommendations for field changes and for a science "more adequate to the challenge of the human condition" (Hayes et al. 2021). These emphasize a multilevel, process-based, multidimensional, prosocial, and pragmatic focus for research and practice in health and mental healthcare and digital means can springboard research and practice to the next level. Acceptance and Commitment Therapy (ACT) informed digitized interventions are gaining ground in their ability to effectively achieve health behavior change and lead to improvements in vitality and well being among individuals who suffer from a variety of health and mental health problems. This presentation examines the opportunities and challenges for utilizing digitized ACT interventions. Findings and lessons learned from ACTHealthy laboratory's recent studies will be presented, utilizing a variety of digitized innovations in the prevention and treatment of human suffering.

**Short Bio:** Maria Karekla, Ph.D., is a licensed clinical psychologist, peer-reviewed Acceptance and Commitment Therapy trainer, Professor at the University of Cyprus, and heads the "ACTHealthy: Clinical Psychology and Behavioral Medicine" laboratory. Her research focuses on areas of health promotion and the investigation of individual difference factors (especially psychological flexibility parameters) as they relate to the development and maintenance of various behavioural difficulties. She also examines the treatment of these difficulties utilizing process-based and Contextual Behavioral Science principles and innovative delivery methods (e.g., digital interventions, virtual reality) in line with precision and personalized medicine.

This led to very successful digital interventions for which she received numerous local, European and international grants, and awards. She is appointed by the Cyprus Minister of Health to the National Strategic Planning Committee for Mental Health and the National Advisory Committee for Tobacco Control, and the Board on Medically Assisted Reproduction and previously in the National Bioethics Committee. She served as the convenor of the European Federation of Psychology Associations' (EFPA) Psychology and Health committee and is a member of the e-health task force. She is the immediate past-President of the Association for Contextual Behavioral Science (ACBS), from where she received the status of "Fellow" in 2019. In 2023 she became a fellow of the European Health Psychology Society and in 2021 by the Society of Behavioral Medicine; in 2018 she was nominated as Cyprus "Woman of the Year: Academic/Researcher category." She has published more than 140 peer-reviewed scientific articles, 13 chapters in edited books, 3 books, 4 technical reports and numerous papers in scientific conference proceedings. Her first psychotherapeutic children's story book was nominated for the 2017 National Literary Awards (category Children/Adolescents) and for her illustrations for the book. She is active in scientific journal editorial boards (e.g., Journal of Contextual Behavior Science, Cognitive Research and Therapy). Moreover, she is a TEDx speaker and she has been hosted and interviewed for her work by numerous podcasts, newspapers, TV and radio stations nationally and internationally.

**Do your students struggle with research methods and statistics?**

Introducing a digital learning resource designed to support psychology students.

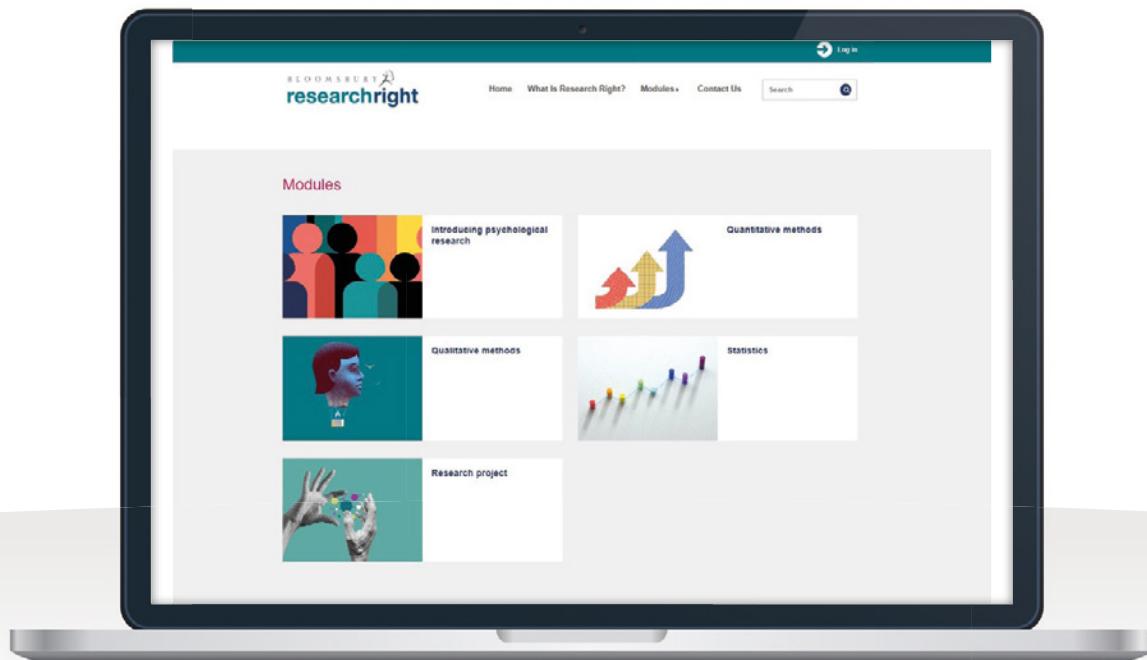

**Research Right** is designed to:

**Build your students' confidence and independence in a challenging area**

**Enable your students to grasp the theory AND practically apply it**

**Save you time!**

Using psychology-specific context and examples, **Research Right** gives students all the tools and resources they need in one handy environment. Covering everything from introductory topics to final year projects, it helps them build knowledge, practical skills and confidence.

## About Cyprus

### Geography

Cyprus is the third largest island in the Mediterranean, after Sicily and Sardinia, with an area of 9.251 sq. kms (3.572 sq. miles). It is situated at the north-eastern corner of the Mediterranean, at a distance of 300 km north of Egypt. The Greek island of Rhodes lies 360 km to the north-west. Cyprus' coastal line is indented and rocky in the north with long sandy beaches in the south. The north coastal plain, covered with olive and carob trees, is backed by the steep and narrow Pentadaktylos mountain range of limestone, rising to a height of 1.042 m. In the south, the extensive mountain massif of Troodos, covered with pine, dwarf oak, cypress and cedar, culminates in the peak of Mount Olympus, 1.953 m. above sea level. Between the Troodos range and the Pentadaktylos mountain range lies the fertile plain of Messaoria. Arable land constitutes 46.8 per cent of the total area of the island. There are no rivers, only torrents which flow after heavy rain.

### Demography

The population of the Republic of Cyprus is 918.100 (2021) of whom 724.000 are Cypriot (78,9%) and 193.000 (21,1%) are foreign citizens residing in Cyprus.

### History

The earliest presence of human beings in Cyprus dates back 10,500 years. Noteworthy from the prehistoric period are a burial dating back to 7,500 BC, which contained the remains of a cat, making it the earliest evidence of feline domestication in the world and the Neolithic settlement for Choirokoitia, which dates back to 6,800 BC and is a Unesco World Heritage site.

The introduction of copper made Cyprus one of the most important exporters of the metal in the Middle East and beyond and during this time we find Cyprus being mentioned in letters between its kings and the kings of Egypt, the Hittite kingdom and the kingdoms of the Levant. It is during the second millennium BC that contact with the Minoan civilization and then the Mycenaeans from Greece brought the first waves of Greek colonization to the island. By the end of the second millennium BC the Greek identity was firmly established on the island. This is also the time that the modern name, Cyprus (Kypros in Greek), appeared for the first time.

Other peoples from the Levant, like the Phoenicians, Assyrians, Egyptians, and Persians interacted with Cyprus, either by setting up trading posts or by bringing Cyprus under their direct or indirect control. Alexander the Great seized the island in 333 BC and subsequently it was passed on to Ptolemaic Egypt and then Rome. Christianity was preached in Cyprus by Apostle Paul in the first half of the first century AD and it is said that the Roman proconsul of Cyprus, Sergius Paulus, converted to Christianity, becoming the first Christian ruler. Christianity remains the predominant religion on the island.

The island then passed to the Eastern Roman Empire in 330 AD. The island was invaded by the Arabs in 649 AD and from 688 AD it was considered a condominium between the Byzantines and the Arabs. This lasted until 965 AD when the Arabs were defeated by the Byzantine Emperor Nicephorus II Fokas. In 1191 AD King Richard the Lionheart conquered Cyprus and sold it to the Knights Templars who, in turn, sold it to Guy de Lusignan, the former King of the Kingdom of Jerusalem. He was the first King of the Frankish dynasty which ruled Cyprus until 1489 when the widow of the last king, Catherine Cornaro, abdicated her throne in favor of the Republic of Venice. In 1570 the Ottoman Turks invaded Cyprus which fell after a year of fighting. The Ottoman occupation lasted until 1878 when Cyprus became a British Protectorate and, from 1925, a Crown Colony.

After an armed struggle by the Greek Cypriots in 1955-59, the island was granted independence in 1960. In 1974 Turkey invaded the north of the island in response to a coup which overthrew the elected president of the Republic of Cyprus and has been occupying 37% of the island since. This resulted in the mass displacement of 160,000 Greek Cypriots to the south and 40,000 Turkish Cypriots to the north. Today the island is a European Union Member State, but the northern part is not controlled by the internationally recognized government of the Republic of Cyprus.

## Flag

The flag of the Republic of Cyprus was defined in 1960 when Cyprus became an independent sovereign state.

The background is white with a copper-coloured (pantone 1385 C) silhouette of the map of Cyprus in the centre of the flag, above two crossed olive-green-coloured (pantone 574 C) olive branches. The copper colour has a dual symbolism: first, the name of the island is said to derive from an ancient word for copper (Eteocypriot or Sumerian); and second, copper is closely associated with Cyprus since antiquity when the island became a major producer and supplier of this mineral resource. The olive branches are symbols of peace.

## Climate

Cyprus has a Mediterranean climate: hot, dry summers from June to September and mild, wet winters from November to March, which are separated by short Autumn and Spring seasons. Sunshine is abundant during the whole year, particularly from April to September when the daily average exceeds eleven hours. Winds are on the whole light to moderate. Gales are very infrequent and heavy storms rare.

Snow hardly falls in the lowlands and on the northern range, but is a frequent feature, every winter on ground above 1.000 metres in the Troodos range. During the coldest months it lies in considerable depth for several weeks, attracting skiers.

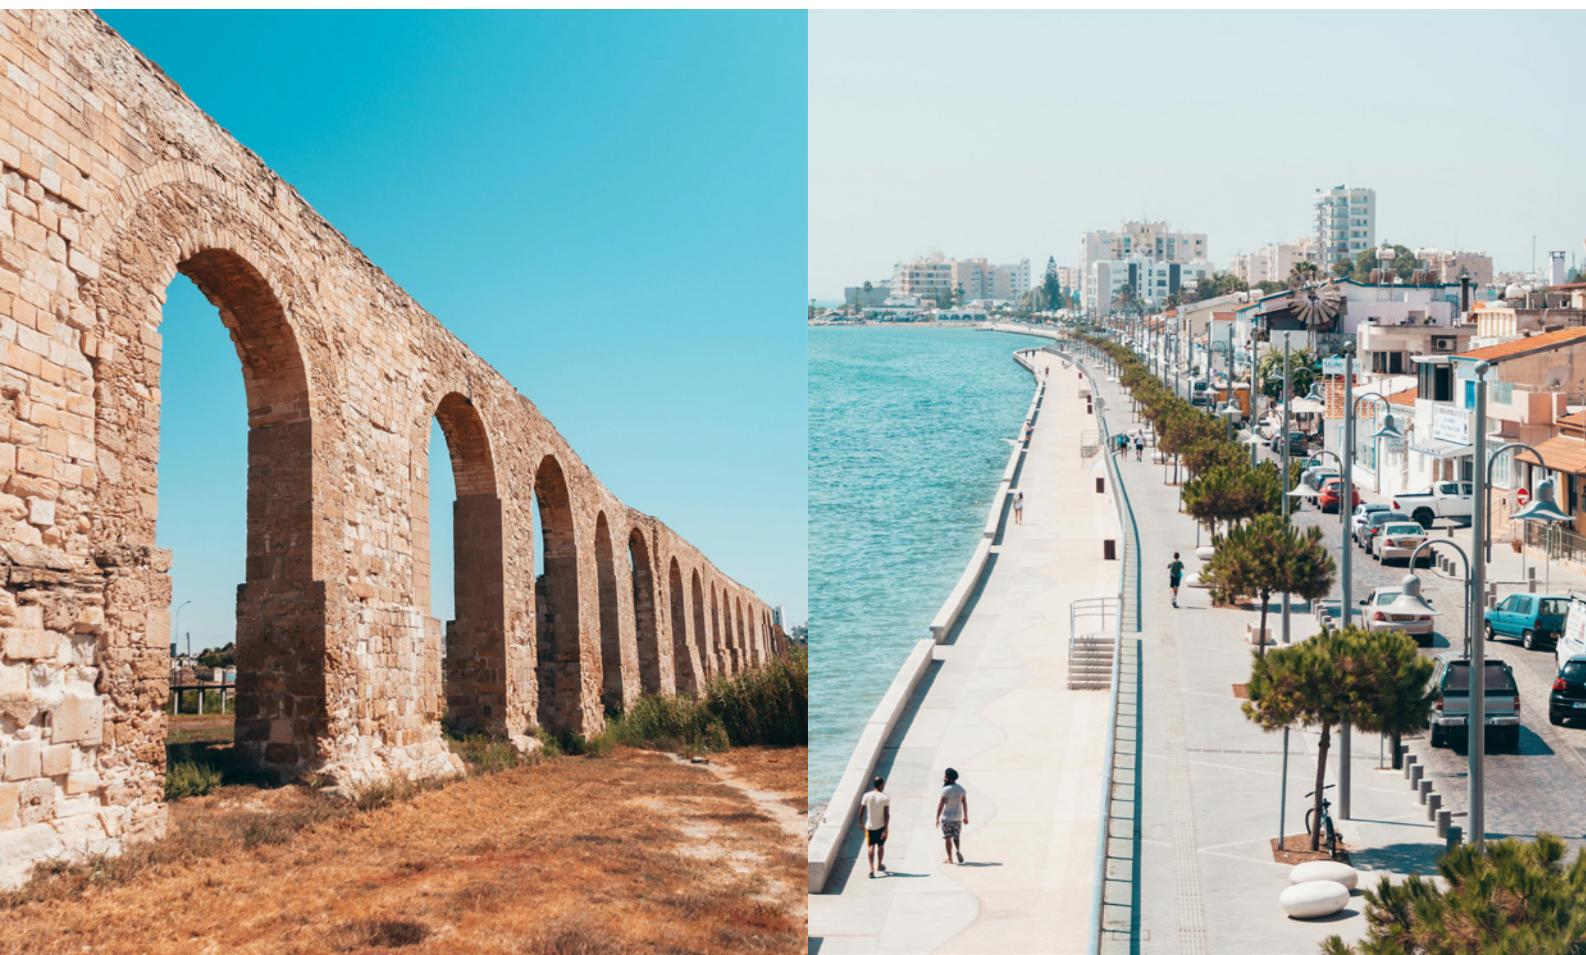

## Food and Drink

The food of Cyprus reflects the rich and turbulent history of the island and its indelible Greek culture. You will find tastes influenced by the Middle East, Asia Minor and the Venetians, all using fresh local ingredients, herbs and spices and olive oil. The Mediterranean diet, with its grains and pulses, sun-ripened fresh fruit and vegetables, high-protein fish, lean meat and poultry and wine, is a healthy option.

Cyprus is known for its Hallumi cheese which is made from goat milk and unlike other cheeses it can be cooked in a variety of ways without melting.

Cyprus has a long tradition in wine-making that goes back over 4,000 years. In ancient times wine was a major source of wealth for the island. The island supplied the Pharaohs of Egypt and Cyprus wines were in great demand amongst the ancient Greeks and Romans.

Commandaria is acknowledged to be the oldest wine in the world and was probably the first to be given an 'Appellation d'Origin' (label of geographical origin). Legend says that Commandaria was originally made for Richard the Lionheart and the Crusaders. The dessert wine, which has a taste like sweet sherry, has been made using the same method for hundreds of years. The grapes are picked late, dried in the sun to enhance their sugar content and then pressed. The run-off is collected and fermented in tanks or in huge earthen ware jars. The sweet wine of Cyprus became known throughout Europe under the name Commandaria depicting its geographical origin "Commandarie" which was the name given to the land owned by the Knights Templar and later the Knights of St. John.

## About Paphos

Paphos, a city rich in history, is a gem of Western Cyprus. The city's existence can be traced back to the Neolithic period, claim archaeologists. Believed to be the birthplace of Greek Goddess of love and beauty, Aphrodite, Paphos proudly boasts the remains of villas, palaces, theatres, fortresses and tombs that belong to Classical, Hellenistic and Roman periods.

Such exceptional architectural and historic value is an ornament to the city that is included in UNESCO's list of world heritage as a natural and cultural treasure. Paphos, roughly divided into Old Paphos and New Paphos, is also famous for its sun-kissed beaches. Paphos was valued as a major port and the capital of Cyprus during Roman times. Later when the British colonized the island, the city started losing its value especially after Nicosia gained importance.

### About

- Paphos is a small charming harbor town.
- Geographically located in the west part of the island, with the population of 52.800 people.
- Pafos is entwined with Greek mythology, and the legendary birth of Afrodite on her shores brought fame and worshippers there to follow the cult of the Goddess.
- This part of the island possesses all the elements of a perfect holiday location, conference meetings, dining, shopping and nightlife; as the choices are too many to suit each one's preferences.
